

What is Aworker?

Multi-Chain Verified Data Protocol. Aworker connects blockchain technology to the real world by providing decentralized reputation network for the businesses and people. Our protocol makes it easy to create and manage applications based on verified data and reputation score. People can control their information in one place and capitalize it. Aworker blockchain framework works with public blockchains and has the power to customize it for different applications.

What problems solves

1. Data Falsification
2. People don't have control over the data
3. Centralized Data Verification

Token Aworker

The Aworker cryptographic token (WORK) will be introduced to create cryptoeconomic incentives on the Aworker protocol. WORK is a token used to pay verification fees and data exchange between system users. It will be also a fungible asset for application participants that want to buy/sell the token to use on the platform. The number of tokens is limited.

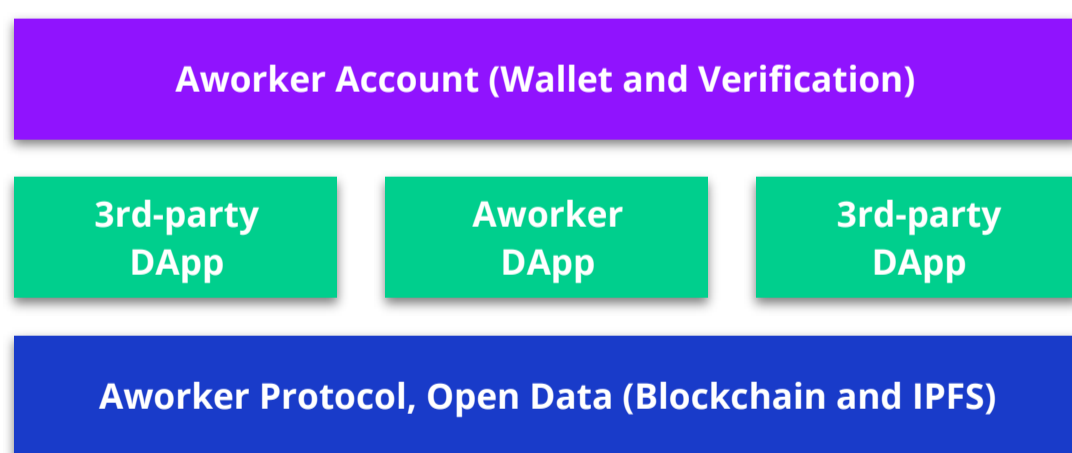

How does Aworker work?

Aworker is a new high-performance public protocol that include data exchange, identification framework and reputation system. To implement blockchain technology to the real world we need to build rich ecosystem of applications for people based on verified data.

Aworker protocol will launch with two major components for it:

- Aworker protocol
- Aworker decentralized app

Aworker DApp is a first application on Aworker Protocol. Aworker DApp is next-generation blockchain platform for recruitment. Aworker app reinvents Human Resources processes via referrals and smart contracts. The search for employees powered by smart contracts reduces "cost per hire" up to 4 times.

Aworker Token Sales

Hard Cap: 24,770 ETH
Limit of Tokens: 4.8B WORK tokens
Number of tokens for ICO: 40%
Price: 1 WORK = 0.000025 ETH (~\$0.015)

Private Sale: May 26 (20% discount)
ICO: T.B.A.

Token Sales

Private Sale: from May 26
ICO: T.B.A.

Core Team

Anton Cherkasov
CEO & Co-founder

Anton is an entrepreneur with 8 years experience. He is the founder of SaaS service Kepler Leads. Anton has a great expertise in launching IT projects and promoting them into the market. Previously worked in the development of Wildberries.

Michael Doshevsky
CTO

Mikhail is a developer at Kaspersky Lab. Manages the development management at Digit. Key competencies – the design of services and applications, C #, REST API, Microsoft technologies stacks: ASP.NET, Web API, Azure.

Sergey Streltsov
CMO & Co-founder

Sergey is a content director, formerly Global Marketing Director, at Yoola (the world's largest independent multichannel network). Has a wide experience in promotion in B2B and B2C markets. Expert in the video content niche and product promotion.

Michael Barkov
HR Director & Co-founder

Mikhail worked at the position of HR Director in PAZOLINI (one of the world leaders in the production and sale of footwear and accessories) and Talent Acquisition and Development in L'Oreal. He is responsible for product promotion on the HR market and hiring employees for Aworker.

Svetlana Fomenkova
Business Development

Svetlana has an extensive expertise in the development, strategy and promotion of the company. She worked with such brands as Lexus, Philip Morris, FHM, The Macallan, Hearst Shkulev Media, FIFA and others.
